# Comp126 Design Spec

Summary

I'm in the process of co-founding a project in response to the Covid-19 global pandemic which will start in the summer when Covid's aftershocks start to surface. These aftershocks will hurt Charlotte's lower-income communities more than the higher-income areas. I though this final would be the perfect opportunity to utilize the skillset I acquired over this semester in Comp126 to develop a webpage for it – killing two birds with one stone (and real-world application practice).

In many facts, Charlotte is modern, yet simple. I want the site to reflect the spirit of Charlotte in all attributes (the color schemes, fonts, and images). I want the tone to be modern, classic, and simple. I can achieve this through using Charlotte's recognized emerald green used on our street signs and city flag. Through contrasting the emerald green (used in background-colors and <h> attributes with simple white and black colors, I will achieve the target of a city-spirited, simple design.
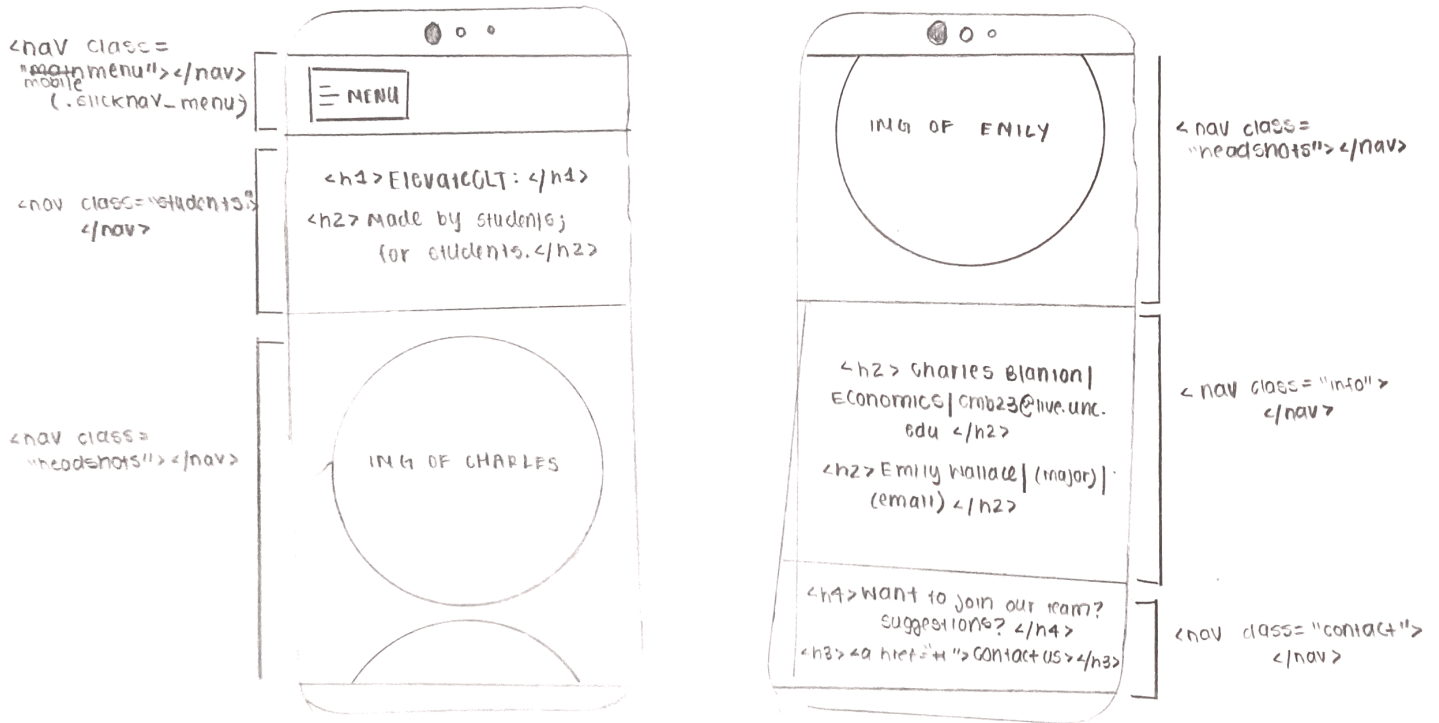

The simple color scheme is best for ElevateCLT because the site for this project will be used for mostly informative purposes. At the moment, I do not think we will be using it for other purposes.
